

Lecture 8

Exercises in Understanding Design Basics

Matthew Farah

March 2, 2026

I didn't take notes for each example taken up in class for this one, just information that seemed generally relevant

- Choosing the form that a system should take is more challenging than what functionalities it should have.
- A system is a collection of one or more elements in an environment which fulfills one or more tasks.
 - Composite systems are defined as systems which use more than one such element.
- Modules are used to hide secrets.
- Business events are independent of one another.
